

Turn enterprise data into intelligence that works.

Birbal connects data, processes, people and systems into a unified intelligence layer, so teams move from idea to market faster: finding answers, creating artefacts and automating work, grounded in your own enterprise knowledge.

Human-in-the-loop by design: people stay in control of key decisions, so AI value is measurable, accountable and safe to scale.

THE CHALLENGE

Enterprise knowledge is disjointed.

Data lives across hundreds of sources and systems, and expertise in a handful of people's heads.

- Information scattered across systems
- Time lost searching and verifying data
- Decisions made without the full context

One platform, three ways to work

Birbal Search

Explore enterprise knowledge through chat, with trusted citations back to every source.

Birbal Assistant

Generate and govern artefacts with guided human-in-the-loop flows and canvases.

Birbal Agent

Automate complex processes with agentic flows, deeply grounded in enterprise knowledge.

Faster from idea to market

35–40%

reduction in discovery effort

30–35%

faster decision-making

25–30%

reduction in analysis time

20–30%

increase in transformation success rate

Speed to market

Consolidate diverse enterprise data to reduce idea-to-market time, moving from discovery to design and delivery without waiting on scattered knowledge.

Built for every role in transformation, from discovery to delivery

Business Architect

Capability maps, value streams, target operating model and change roadmap

Product Owner

Epics and stories, prioritised backlog, acceptance criteria and value validation

Business Analyst

As-is and to-be processes, functional requirements, UAT scenarios

Solution Architect

Application landscape, integrations, NFRs and architecture compliance

Change Manager

Align teams and track execution with real-time visibility into progress

Why Birbal

Connects everything you know

Connectors and ontology-based ingestion join scattered data into one knowledge graph.

Answers you can trust

Every answer traced to its source, always within your data permissions.

Experts in control, work automated

Human-in-the-loop canvases create artefacts; intelligent workflows automate the rest.

Secure by design, deployed your way

- **GDPR-ready:** data stays in-region; no AI model retains or trains on your content
- **Enterprise permissions:** private, team and public access; SharePoint permissions inherited
- **Encrypted and isolated:** AES-256 at rest, encrypted in transit, row-level security, per-tenant index

SaaS

Shared compute on Microsoft Azure, isolated tenant data

Private cloud

In your own Azure, GCP or AWS subscription
